BRUNO PINHEIRO

Product Designer & Builder | 0-to-1 Products | Design Systems | AI-Native

Irish/EU Citizen | Valencia, Spain | hello@brunopinheiro.eu | brunopinheiro.eu | linkedin.com/in/brunopinheiroeu

Summary

Product designer and builder with 25 years of experience taking products from idea to launch. As the sole designer at Edco I established the design practice, built a **design system** used across **3,500+ products** and redesigned a learning platform for **50,000+ students**. At Brunix Studio I design and ship AI-assisted products 0 to 1 with Claude Code, Codex, Lovable and React, validating them with user surveys and usability testing. I own the whole loop, from discovery and UX/UI to working code, launch and measured results (delivery cut from **8 days to under 2**), and work comfortably with engineers, stakeholders and non-technical teams.

Experience

Lead Product Designer

The Educational Company of Ireland (Edco), Remote | May 2022 to Present

Ireland's leading educational platform, 50,000+ students

- Established the design practice as the **sole product designer**, replacing a legacy process of reopening old FLA projects with a component-based design system, Git (Bitbucket) and Jira, and leading a cross-functional team of developers, animators, illustrators and an editor
- Built and scaled a unified **design system** (Figma UI kit with documented contrast and readability standards, plus reusable HTML/CSS components) adopted across **3,500+** products, keeping the interface consistent and faster to hand off to engineering
- Redesigned the main learning platform (interaction design, navigation and UI), replacing the legacy CRT-TV frame and menus with a modern, game-inspired interface approved by the CEO, expanding usable screen space by **11%** and improving focus and engagement for **50,000+** students
- Led the Flash-to-HTML5 migration and redesigned the production workflow, increasing monthly delivery from **30 to 100 products** and cutting developer hours by **50%**; replaced Dropbox + FTP with Git-based releases and a clean-deploy script
- Cut tester revision rounds from 6-7 to a maximum of **3** by mapping the errors that returned most, adding my own QA filter before games enter the review loop, and giving developers targeted feedback
- Evolving the Bua CMS with the developer into a game editor that lets non-developers assemble games, cutting production of two game types from about **2 hours to 2 minutes** once images and audio arrive; introduced component thinking to the PHP codebase with shared includes
- Translated stakeholder needs from authors, teachers, the CEO and the project manager into product direction, and hired, tested and trained the most recent developer

Founder and Design Engineer

Brunix Studio, Remote | Nov 2024 to Present

Independent studio building AI-assisted products, internal tools, and workflow automations from concept to deployment

- Validated **Tomei**, a medication-routine app, with a user survey and four rounds of usability testing, choosing Android first because **79%** of respondents used it; the beta runs with 13 testers, 4 of them using it daily
- Redesigned Tomei onboarding from a form into a step-by-step wizard with barcode scanning after tests showed users mistyping medicine names and struggling with times, and removed a blocking dose-field error by accepting the default value of 1
- Designed and built AI-assisted mobile, web, and internal products from 0 to 1 with Codex, Claude Code, Lovable, React/Next.js, React Native, Neon, Supabase and Vercel, choosing infrastructure by constraint (free tiers, easy connection to Claude Code)
- Designing an AI-guided CV builder where users work with an AI to tailor a CV to a chosen job (in development)
- Created Edco/Bua automation tools used by editors that cut resource-production tasks by **10x+**, turning PDF, thumbnail, title, and SVG workflows from hours into seconds

Product Designer, Contract

Imvizar, Dublin, Ireland | Jan 2022 to Apr 2022

- Unified brand identity, a fully responsive website (built in Webflow) and the mobile app UX/UI across devices into one coherent product, directly contributing to the company securing new partnerships and investment
- Built the foundational **design system** in Figma, including AR-specific interaction patterns, still supporting new features today

Founder and Product Leader

Wave VR Studio, Brazil | Jun 2014 to Aug 2017

- Founded and led VR startup building architectural visualisation and tourism platforms in Unity 3D and Unreal Engine, securing incubation at InovAtiva Brasil
- Pivoted from B2C to B2B based on user research, resulting in partnerships with real estate developers and tourism boards

Earlier: Product Designer at McGowans Print, Ireland (2018-2021) | Motion Designer at Therapie Clinic, Ireland (2021) | Frontend Developer, 3D Artist, eLearning Designer in Brazil (2002-2014)

Selected Work (brunopinheiro.eu)

- **Bua na Cainte** (Edco): modernised a legacy Irish-language learning platform with a component-based design system in Figma and HTML/CSS; delivery of 15 games cut from 8 days to under 2
- **Tomei** (Brunix Studio): survey-validated medication-routine app with an onboarding wizard, barcode scanning and four rounds of usability testing; in beta
- **Imvizar**: unified brand identity, responsive website and AR app UI under one design system that still supports new features
- **Karakuê**: shared karaoke queue built around a simple flow (scan QR, find song, join queue); live
- **Remonkei**: calendar-based invoice generation for freelancers that replaces manual spreadsheets; in closed testing

Skills

Design: Product design, UX/UI design, interaction design, design systems, systems thinking, complex workflows, prototyping, motion (Premiere, After Effects, Blender), Figma

Research and Product: User research, usability testing, surveys, discovery, MVP scoping, roadmap and delivery, stakeholder communication, QA and feedback loops, Jira

Frontend and Technical: HTML/CSS/JS, PHP, React, React Native, Next.js, Webflow, Git (Bitbucket), Python, Shell, Neon, Supabase, Vercel

AI and Automation: AI-assisted development, AI-powered workflows, Codex, Claude Code, Lovable, Cursor, OpenAI API

Education

AI Product Management Certification | 2025
Maven, Product Academy, Remote

UX Bootcamp | 2019-2020
Talent Garden Innovation School, Ireland

MBA in Entrepreneurial Management and Innovation | 2016-2017
Universidade Federal de Campina Grande, Brazil

BSc in Graphic Design | 2002-2005
Universidade Tiradentes, Brazil

Languages: Native Portuguese | Fluent English | B1 Spanish
